

Earthquake, Flood & Hurricane Risk Mitigation

About Procovery

Offering high-end Risk Consultation services, Procovery conducts on-site assessments to identify potential exposures and help companies reduce risks from natural catastrophes.

The Benefits

Protecting Essential Equipment

Examples: Proper bracing of computers, cabinets, lab equipment, ceilings, gas lines, and water lines can reduce downtime after an earthquake. Our principle consultant has surveyed hundreds of facilities to help clients protect vulnerable contents and equipment.

Fire Following Earthquakes

Success Story: For a pharmaceutical client, our consultant identified threats that could result in fire following an earthquake. We helped the client hire a contractor, and we supervised the repairs.

Water Damage from Earthquakes

Success Story: Procovery surveyed the entire sprinkler system for a pharmaceutical client. We identified weak points that could be at risk in an earthquake, helped the client to obtain executive funding, and assisted in procuring the right contractor for the job.

Flood Risks

Success Story: Our consultant surveyed the critical equipment at a biotech research facility on the SF peninsula for exposure to flooding. We outlined low-cost techniques for protecting this equipment and data.

Disaster Modeling

Example: Using sophisticated computer modeling we were able to determine if an earthquake might cause damage at our client's critical facilities in two different cities.

Who Can Benefit?

Large corporations and mid-size companies

Multiple locations or single-site operations

Multiple "Regional" exposures, such as Northern California vs Southern California, Memphis, Gulfcoast, Pacific Northwest, etc...

New construction, acquisitions or expansions

Mission-critical facilities in flood, earthquake or wind prone areas

Qualifications

Procovery is dedicated to attracting the best and the brightest in every area of risk consulting and disaster planning. Every consultant has over 12-years of experience and is a recognized leader in their field.

Contact Procovery

"Our consultants are ready to help you reduce disruptions, prepare for disaster, and remain profitable."

- Chris Scheffler, Procovery Risk Consulting
